

Commander Licence and Registration

The below document outlines in detail the steps in regards to registering for your Sommer account with our sensors and the Commander software. Each sensor delivered is provided with a copy of the relevant Commander software. Commander software can also be supplied if you contact:

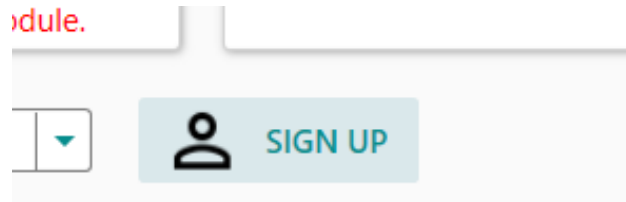

customer.support@sommer.at

	Steps	Admin user	Individual user
Sign up and Login	1-10	✓	✓
Unlock Access	11-24	✓	✗
Register Module	24-29	✓	✓

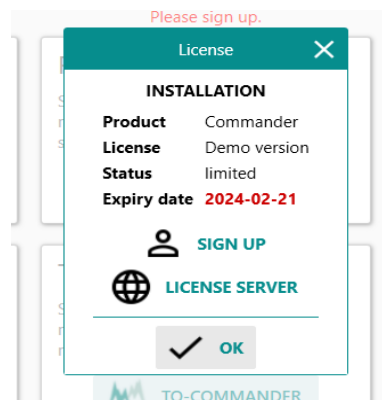

Step 1: Once you have downloaded the software on to relevant laptop or PC the following steps must be followed to register your Sommer account and module. On initial start up you will be provided with a demo version until you have registered. Demo accounts last 30 days. After you have downloaded the software and clicked onto the start up icon the below Sommer suite should appear. Based on what Sommer sensor is being used, you will be able to access the relevant Commander module in the Sommer suite.

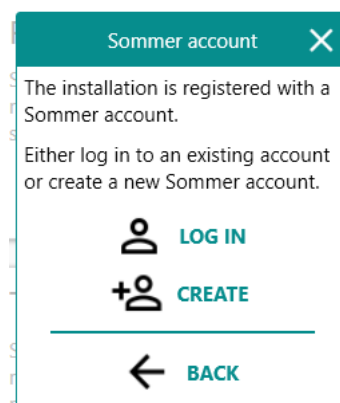

Step 2: If you have not registered or signed up for the relevant Commander module you wish to use then red coloured font will prompt you to do so. To sign up click the 'sign-up' button shown below.

Step 3: After clicking the sign-up button, the below pop-up menu will appear. If you are currently using a demo version the date of expiry will also be highlighted in red font. If there is no red writing then you are not using the Demo version and there will be no expiry date. You will then have 2 options to either '**sign up**' or access the '**licence server**'. A new user will have to click the '**sign-up**' button first to get a Sommer Account.

Step 4: After clicking '**sign up**', the below pop-up window will appear. This gives you the option to log in using an existing Sommer account or the option to create a Sommer account. If you click the '**log in**' button you will be directed to window where you can input details of the registered account. If first time using software and need to sign up then click the '**create**' button.

Step 5: After clicking '**create**' the below pop-up window will appear. Fill out the relevant boxes with your information. You will require a valid email (for confirmation) which will be the access account to sign up for the individual modules. It is worth noting that only one account can be registered per email address. It is good to ensure that there will be future access to this email address for managing the accounts and the relevant modules in the future.

Create Sommer account

A Sommer account is created and the installation is registered with the Sommer account.

The Sommer account is used to manage installations and is the access to the license server.

SOMMER ACCOUNT

Email

Name

Organization

Password

The password must be at least 8 characters long and contain a number and a capital letter.

Confirm password

Please agree to the terms and conditions.

+ 

CREATE

☐

By creating the Sommer account, you agree to the terms and conditions and privacy policy of Sommer GmbH.
[General terms and conditions](#) [Privacy policy](#)

←

BACK

Step 6: After you have filled out the boxes above and accepted the terms and conditions then you will be able to click 'create.' Once this has been done the below pop up will appear. It prompts you to associated email address a where you will need to verify the account.

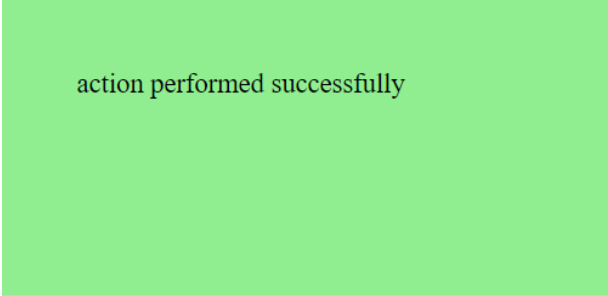

Information

You have received an email with a link from "office@sommer.at".
The recipient's address is "lewis.campbell@sommer.at".
Before you proceed activate your Sommer account by clicking on the link.
Don't forget to check the spam folder if necessary.

✓

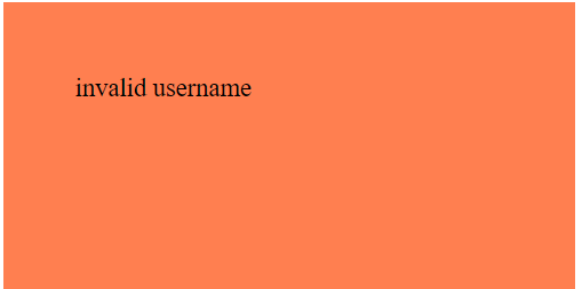

OK

Step 7: After clicking the email verification link in the associated email address to the account, the below green window will appear.

action performed successfully

Step 8: If the below window appears after verifying the email address from the email, then there has been an issue. Most likely the email address has already been registered previously to another account. **Each email address can only be registered to one Sommer Account.**

invalid username

Step 9: After the above steps have been completed and we have received a green box with '**action performed successfully**' we can then return to Commander software to continue.

Step 10: After you have verified your email address, the '**register**' button can be clicked which is shown below. It is important that the email has been verified before clicking '**register**' or it will not work.

Complete registration

You will shortly receive an email from "office@sommer.at". Please open the link in the mail to verify the creation of your Sommer account. Don't forget to check the spam folder if necessary.

Continue with the registration of the software.

BACK

Step 11: Once 'register' has been clicked the below window will appear. You will notice that the red font will now be removed and the status has now changed from a specific date (30-day demo) to unlimited. We have now registered and set up the Sommer account and the next step is to activate the relevant modules. In the below example we can see that we have registered the Sommer Account, however the modules have not been activated. Click 'register module'

REGISTER MODULE

✓

OK

Step 14: To register the relevant module, you will require a Sommer account and a registration code that is specific to the user / organisation. The below example shows that in your purchase order or delivery note from the sensor there is a registration code which you can use to register the module. The registration code is highlighted below. If you do not have a registration code in your bill of delivery then please get in touch with customer.support@sommer.at

BILL OF DELIVERY NO. 2324**1x TQ- commander 3.0****/ Your reference: e-mail 27 th of November**

Sehr geehrte Damen und Herren!

We thank for your order and may supply as follows:

Pos.	Item No.	Description	S/N	Quantity Unit
10	22230	TQ-Commander 3.0	5B4aRq 7sWUR	1 pc(s)

Step 15: To register the module, you will need a pin/password and a registration code. The registration code is the code you receive on your bill of delivery.

Module registration

Enter the registration code of a module with the corresponding PIN and request information about the module.
